Frequently Asked Questions:

What is Juvederm?

Who is JUVEDERM indicated for?

What makes JUVEDERM different from other dermal fillers?

What is hyaluronic acid?

How is JUVEDERM treatment performed?

Does the correction last forever?

What are the possible side effects of JUVEDERM?

What is Juvederm?

Juvederm injectable gel is a new-generation smooth consistency filler that helps to instantly restore the skin's volume and smooth away facial wrinkles and folds like your "smile lines" or nasolabial folds (the creases that run from the bottom of your nose to the corners of your mouth). Juvederm comes in two formulations—Juvederm Ultra and Juvederm Ultra Plus.

To find out if you are a candidate for new Juvederm treatment, please call us at (780) 424-4440 for a complimentary consultation with Dr. Sapijaszko and his team. We will be glad to see you.

Who is JUVEDERM indicated for?

Juvederm injectable gel temporarily adds volume to facial tissue and restores a smoother appearance to the face.

Juvederm therapy is indicated for the correction of facial wrinkles and folds, such as nasolabial folds (the creases running from the bottom of your nose to the corners of your mouth,) enhancement of the cheek bones as well as lip augmentation.

Juvederm injectable gel is available in two formulations to allow Dr. Sapijaszko to tailor treatment to your unique needs. Juvederm Ultra provides versatility in contouring and volumizing facial wrinkles and folds. Juvederm Ultra Plus is a more robust formulation for volumizing and correcting deeper folds and wrinkles.

What makes JUVEDERM different from other dermal fillers?

Juvederm injectable gel employs its unique manufacturing process to provide the high concentration of cross-linked hyaluronic acid enhancing its ability to provide long-lasting results. This advanced manufacturing process works to create a smooth consistency gel that flows easily into the skin and provides a smooth, natural look and feel. From Dr. Sapijaszko experience, it is clear that Juvederm produces less swelling in the areas treated.

To find out if you are a candidate for new Juvederm treatment, please call us at 424-4440 for a complimentary consultation with Dr. Sapijaszko and his team. We will be glad to see you.

What is hyaluronic acid?

Hyaluronic acid (HA) is a naturally occurring component of all connective tissues as well as skin. Because of its uniform structure throughout all living species, it rarely provokes adverse immune response. HA attracts and holds on to water molecules helping to hydrate and add volume to your skin. In addition to its use as an aesthetic treatment, hyaluronic acid has also been used for more than 20 years for injection into arthritic joints to aid movement as well as for eye surgeries and wound repair.

There are several families of popular HA injectables including Restylane line (Non-animal source derived: Restylane Fine Lines, Restylane, Perlane, Restylane SubQ,) Hylaform line (Animal source derived: Hylaform Fine Line, Hylaform Plus) and, more recently, Juvederm line (Non-animal source derived: Juvederm Ultra, Juvederm Ultra Plus) and Teosyal line (Non-animal source derived: Teosyal Kiss and Teosyal Ultra Deep). Although all products contain essentially the same HA molecule, the differences between the products relate to the quantity/concentration of HA present, the degree of cross-linking, the amount of proteins present, their flow characteristics and the target placement within the dermal-subcutaneous continuum.

The versatility of HA products is really helpful in selecting a specific product for each unique application (dermal, subdermal, subcutaneous or supra-periosteal injections.) This versatility, combined with the low risk of immune reactions, makes HA products the cornerstone of injectable fillers.

How is JUVEDERM treatment performed?

Once all your questions are answered, Dr. Sapijaszko will inject Juvederm into the skin using a fine needle to temporarily fill in and augment the treatment area and smooth facial wrinkles and folds such as nasolabial folds (the lines running from the corner of the mouth to the sides of the nose,) marionette lines (the lines running from the corner of the mouth to the chin). Is also a great filler for augmentation of cheek bones as well as lips. Juvederm temporarily adds volume to the skin and may give the appearance of a smoother surface.

Injections may cause some discomfort during and after the treatment. The smooth consistency gel of Juvederm allows Dr. Sapijaszko to administer it easily and smoothly. And, Juvederm is injected directly into the skin using a fine needle to reduce injection discomfort. Dr. Sapijaszko may choose to numb (anesthetize) the treatment area to further minimize discomfort.

To find out if you are a candidate for new Juvederm treatment, please call us at (780) 424-4440 for a complimentary consultation with Dr. Sapijaszko and his team. We will be glad to see you.

Does the correction last forever?

No. Correction is temporary; therefore, touch-up injections as well as repeat injections are usually needed to maintain optimal corrections. The good news is that the results last up to 6 months or longer. The individual results can vary as each of our metabolisms are different and we can metabolized injected product in different ways. Most patients feel that re-treatment with Juvederm is needed in 4-6 months.

What are the possible side effects of JUVEDERM?

Most side effects are mild or moderate in nature, and their duration is short lasting (7 days or less). The most common side effects include, but are not limited to, temporary injections site reactions such as: redness, pain/tenderness, firmness, swelling, lumps/bumps, bruising, itching, and discoloration. As with all skin injection procedures there is a risk of infection.

Report any side effects to Dr. Sapijaszko and his team as soon as they become evident.
